Subject IN-FLIGHT REFUELING - FOG

Ref

- (1) ECP-91
- (2) Price Quotation - attached
- (3) Delivery Schedule - attached
- (4) Report SP-207 "In-Flight Refueling Design Study" - attached

Attached are the price and delivery schedules of our proposal for installation of In-Flight Refueling capability of FOG aircraft. This quotation does not cover the installation of a different navigation system, pilot comfort improvements, any [redacted] revisions required, revised fueling systems or new single side band radio. Also this quotation does not include the rework which might be necessary to the KC-135 due to the different fuel required by the U-2.

25X1A

It may be desirable to install a separate 1200 gallon tank in the KC-135 to carry JP75 if many complications develop in using the basic KC-135 fuel system.

In the schedule, we assume that a go-ahead is given for the whole batch of aircraft to be modified at one time so that one run of parts can be made efficiently.
